

Pillow block bearings are one of the most popular bearings both at home and abroad. Pillow block bearings are widely used in various kinds of industries and machines such as car wash equipment, construction machinery, fans, HVAC, food processing, metal working machinery, textile machinery, paper making & paper converting equipment & woodworking machinery. Pillow block bearings are mounted type bearings available in flanged & upright styles in different inch & metric sizes. Pillow block bearings are designed to support shafts. Features include mounting surfaces parallel to shaft axes & elongated bolt holes in bases or feet of units for adjustment & mounting of pillow block bearing.

Zinc alloy pillow block: KP000 Series
